

# Easily manage access of employees and visitors across multiple buildings

Check out Access AtWork®: a brand new **cloud-native** access control system

## Need more control over your access control

Your company grows and evolves. **But your access control system is lagging behind.** The system — and its users — simply cannot manage all those different buildings, sites, and zones anymore. Not to mention the ever-expanding and changing workforce. Sounds familiar?

Scalability has always been the Achilles' heel of an access control system. Especially for a system that runs on your own servers and IT infrastructure. Managing, maintaining, and updating such a system burdens your IT staff.

As with many software solutions, scalability can be found **in the cloud**. Therefore, a cloud-**native** access control system would definitely relieve the strain on your servers, IT infrastructure, and IT staff.

### “Cloud-native, you’re saying”?

Yes, there’s a difference between cloud-*native* and cloud-*based*. A cloud-based application uses a cloud infrastructure. But a cloud-native application is specifically *designed* for the cloud, making it possible to fully exploit the capabilities of the cloud environment.

### But that’s not the full answer yet

Sure, a cloud-native solution offers room for scaling with your company’s growth. Also, hosting, data storage, and software maintenance would no longer be a concern for your IT team. That would be a relief. But...

*Your struggles aren’t just about scalability, hosting, data storage, and maintenance.. Right?*

### Let’s not forget the day-to-day use of the system.

What about setting up, managing, and updating access rights for (new) employees? That’s probably a time consuming task for your system administrators.

## And that’s why Access AtWork® tackles both issues

Here’s how:

1. As a cloud-native access control system, it offers you scalability and flexibility, accessible from any place, at any time.
2. And with its built-in **smart authorisation model**, system administrators set up and manage access rights *faster than ever before*, across any of your sites and buildings.

*Making Access AtWork® your easy-to-use access control system that provides **better insights, with less effort, and a smaller investment.***

### For whom?

Access AtWork® is a system that suits many organisations active in industries like **IT, Software, Financial Services, Banking, Insurance, Telecommunication, and more.**

However, Access AtWork® isn’t restricted to specific industries. It’s been developed for businesses that want to alleviate the workload on their IT teams while managing physical access across multiple sites.

### So what about you?

- > Perhaps you want to replace your outdated access control system?
- > Or maybe you don’t have a system in place at all?

Either way, as an access control system that fully runs in the cloud, Access AtWork® offers you:

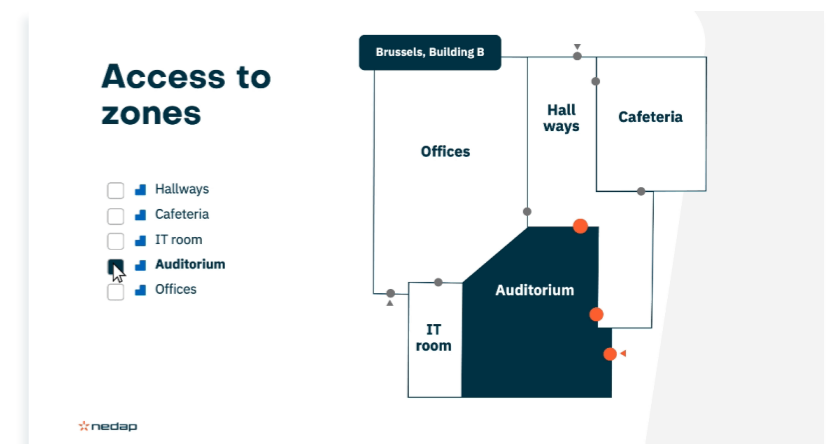

1. Scalability and flexibility
2. Ease of use
3. For a monthly fee

*But how does it deliver ‘ease of use’?*

### Ease of use explained

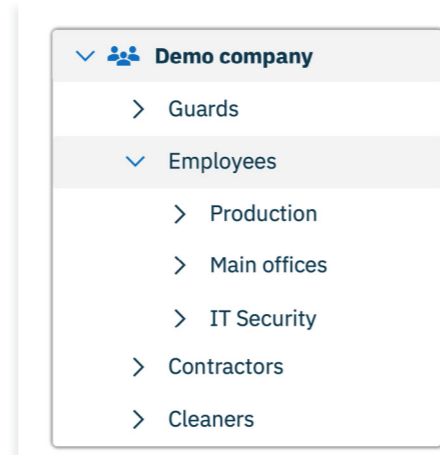

#### Secures spaces instead of doors

Access AtWork® grants access to spaces instead of doors, regardless of how many doors provide access to your space. And if (office) spaces change or employees get different access rights, the **smart authorisation model** automatically adjusts your access policy accordingly.

### Access based on teams

When you add an employee to a team, this person immediately receives the appropriate rights associated with that team. So you won't have to set up rights for each individual separately, **which can be time-consuming and error-prone.**

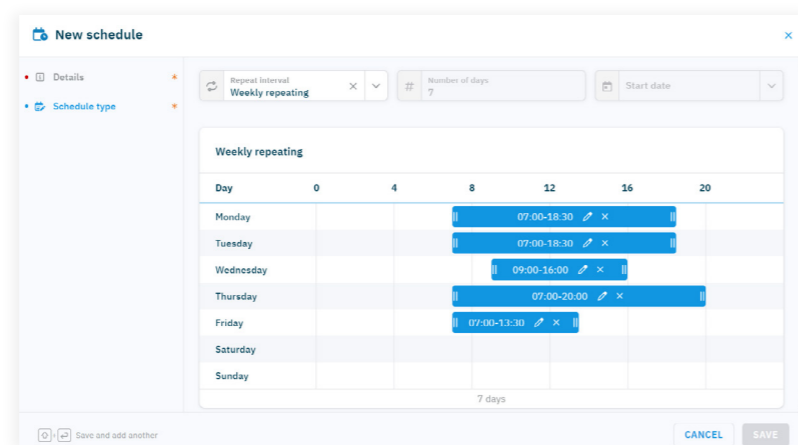

### Visibility of all authorisations

No more complicated dashboards. No more switching between screens. **Access AtWork® provides a complete overview of all authorisations, with the ability to easily switch perspectives.** This means you can view authorisations from the perspective of individuals, teams, or spaces within your building(s).

Zone	Schedule	By membership of

### Intuitive user interface

The menus, buttons, windows, and graphical elements are so logical that users immediately find their way around the software. **Making it easy for multiple administrators to manage access across different sites without the need for expert training.**

## 6 Access AtWork® certainties

### ✓ Easy management

Access AtWork® makes managing access control easy. The system does the work, but you maintain maximum visibility and control.

### ✓ Reliability and experience

Benefit from 45 years of access control experience with Nedap, secure data storage in certified data centers within the EU, and a system that is GDPR-compliant.

### ✓ Integration with existing hardware

The system comes with Nedap door controllers which are compatible with your existing readers and locks. This makes it easy to switch to Access AtWork®.

### ✓ Efficient onboarding

The authorisation model of Access AtWork® quickly assigns the right permissions to new employees. This saves you time, and new colleagues immediately feel welcome.

### ✓ Convenience of cloud

Access AtWork® is a system that operates in the cloud. It's well-secured, accessible from anywhere, and you're not responsible for system updates.

### ✓ Saving on your IT costs

Instead of building and maintaining your own IT infrastructure, pay a monthly fee for the use, maintenance, and updates of the software.

### See for yourself

At this point you've seen quite a bit of Access AtWork®. Still, nothing beats a **live, online demonstration.** Let us walk you through the software to provide answers to any lingering questions you might have..

For instance, we mentioned the **smart authorisation model**, which allows you to set up and manage access rights *faster than ever before.*

We'll demonstrate *how.*
